X-RAY L S SPINE EXTENSION AND FLEXION VIEWS

FINDINGS

Early degenerative changes are noted in the form of small marginal osteophytes.

Grade I anterolisthesis of L5 over S1 is seen which gets pronounced on flexion view.

Normal lumbar lordosis.

Posterior elements appear normal.

Intervertebral discs appear normal.

Para spinal soft tissues appear normal.

Suggested clinical correlation & follow-up.

This radiological report is the professional opinion of the reporting radiologist based on the interpretation of the images and information provided at the time of reporting. It is meant to be used in correlation with other relevant clinical findings. Cannot be used for medicolegal purposes.
